| Influence on Society (qualitative or subjective data) |  |  |
| Benefit of research to scientific community | 3 (high) |  |
| Benefit of research to society at large | Unknown |  |
| Media coverage (Radio, TV, Print, Movie) | The paper builds up and empirically tests a model of global virtual team (GVT) conflicts, in which both <br> antecedents of GVT conflicts and their effect on team performance are examined. Through deeply <br> investigating a nomological network of GVT conflicts, this work confirms and extends previous theory <br> related to traditional team conflicts to GVT conflicts. Moreover, it also highlights the role of <br> communication technology. This paper provides practitioners with a clear picture of how they can <br> manage GVT conflicts. |  |
| This paper is an early work to understand GVT conflicts in a systematic manner and hence serves as a <br> substantial foundation for later work in the field of GVT. It is well cited at many research platforms, such <br> as Google Scholar and Research Gate. Besides, considering the popularity of GVT in various sections, it <br> also impacts a lot of research and practices in other fields, such as management, marketing and others. |  |  |
